2022 Consumer Confidence Report Data BLOOMER WATERWORKS, PWS ID: 60904481

Report will not be mailed out. It will be available in the Bloomer Advance April 26th 2023

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, o hable con alguien que lo entienda.

Dlaim ntawv tshaabzu nuav muaj lug tseemceeb heev nyob rua huv kws has txug cov dlej mej haus. Kuas ib tug paab txhais rua koj, los nrug ib tug kws paub lug thaam.

Water System Information

If you would like to know more about the information contained in this report, please contact William "Bill" Miller at (715) 568-2424 ext: 1.

none

Opportunity for input on decisions affecting your water quality

City hall @ 1503 Main St Bloomer. Meetings @ 5:15 on the 2nd & 4th Wednesday of each month.

Health Information

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which shall provide the same protection for public health.

Definitions

| Term | Definition |
|-----------------------|--|
| AL | Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. |
| HA and HAL | HA: Health Advisory. An estimate of acceptable drinking water levels for a chemical substance based on health effects information. HAL: Health Advisory Level is a concentration of a contaminant which, if exceeded, poses a health risk and may require a system to post a public notice. Health Advisories are determined by US EPA. |
| НІ | HI: Hazard Index: A Hazard Index is used to assess the potential health impacts associated with mixtures of contaminants. Hazard Index guidance for a class of contaminants or mixture of contaminants may be determined by the US EPA or Wisconsin Department of Health Services. If a Health Index is exceeded a system may be required to post a public notice. |
| Level 1 Assessment | A Level 1 assessment is a study of the water system to identify potential problems and determine, if possible, why total coliform bacteria have been found in our water system. |
| Level 2 Assessment | A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine, if possible, why an E. coli MCL violation has occurred or why total coliform bacteria have been found in our water system, or both, on multiple occasions. |
| MCL | Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. |
| MCLG | Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. |
| MFL | million fibers per liter |
| MRDL | Maximum residual disinfectant level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants. |
| MRDLG | Maximum residual disinfectant level goal: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. |
| mrem/year | millirems per year (a measure of radiation absorbed by the body) |
| NTU | Nephelometric Turbidity Units |

| Contaminant (units) | Site | MCL | MCLG | Level Found | Range | Sample Date (if prior to 2022) | Violation | Typical Source of Contaminant |
|-----------------------------|------|-----|------|----------------|-----------------------|---|-----------|---|
| ARSENIC (ppb) | | 10 | n/a | 0 | 0 - 0 | 7/29/2020 | No | Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes |
| BARIUM (ppm) | | 2 | 2 | 0.008 | 0.002 - 0.008 | 7/29/2020 | No | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits |
| CHROMIUM (ppb) | | 100 | 100 | 1 | 0 - 1 | 7/29/2020 | No | Discharge from steel and pulp mills; Erosion of natural deposits |
| FLUORIDE (ppm) | | 4 | 4 | 0.2 | 0.1 - 0.2 | 7/29/2020 | No | Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories |
| NICKEL (ppb) | | 100 | | 1.2000 | 0.5300 - 1.2000 | 7/29/2020 | No | Nickel occurs naturally in soils, ground water and surface waters and is often used in electroplating, stainless steel and alloy products. |
| NITRATE (N03-N) (ppm) | | 10 | 10 | 6.45 | 0.40 - 6.90 | | No | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits |
| SELENIUM (ppb) | | 50 | 50 | 2 | 1 - 2 | 7/29/2020 | No | Discharge from petroleum and metal refineries; |

| Contaminant (units) | Site | MCL | MCLG | Level Found | Range | Sample Date (if prior to 2022) | Violation | Typical Source of Contaminant |
|--------------------------------------|------|-----|------|----------------|--------------|---|-----------|-------------------------------|
| GROSS ALPHA, INCL. R & U (n/a) | | n/a | n/a | 1.6 | 0.0 - 1.6 | 7/29/2020 | INO | Erosion of natural deposits |

Contaminants with a Public Health Groundwater Standard, Health Advisory Level, or a Secondary Maximum Contaminant Level

The following table lists contaminants which were detected in your water and that have either a Public Health Groundwater Standard (PHGS), Health Advisory Level (HAL), or a Secondary Maximum Contaminant Level (SMCL), or both. There are no violations for detections of contaminants that exceed Health Advisory Levels, Public Health Groundwater Standards or Secondary Maximum Contaminant Levels. Secondary Maximum Contaminant Levels are levels that do not present health concerns but may pose aesthetic problems such as objectionable taste, odor, or color. Public Health Groundwater Standards and Health Advisory Levels are levels at which concentrations of the contaminant present a health risk.

| Contaminant (units) | INITE | SMCL (ppm) | PHGS or HAL (ppm) | Level Found | Range | Sample Date (if prior to 2022) | Typical Source of Contaminant |
|---------------------|-------|---------------|-------------------------|----------------|-----------------|---|---|
| CHLORIDE (ppm) | | 250 | | 14.00 | 1.20 - 14.00 | | Runoff/leaching from natural deposits, road salt, water softeners |
| SULFATE (ppm) | | 250 | | 2.60 | 1.70 - 2.60 | | Runoff/leaching from natural deposits, industrial wastes |

Additional Health Information

Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than 6 months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant you should ask advice from your health care provider. Females who are or may become pregnant should not consume water with nitrate concentrations that exceed 10 ppm. There is some evidence of an association between exposure to high nitrate levels in drinking water during the first weeks of pregnancy and certain birth defects. The Wisconsin Department of Health Services recommends people of all ages avoid long-term consumption of water that has nitrate level greater than 10 milligrams per liter (mg/L).
